4.3 Congruent Triangles

Name _____

Date _____ Hour _____

1) Name all congruent parts of the two triangles shown below.

2) Use this original to name the congruence transformation for each image below.

3) Given: $\triangle ABC \cong \triangle DEF$. Solve for x , y , and z using what you know about CPCTC.

4) Use the coordinates below to graph the triangle. Then, flip the coordinates over the origin (0,0) to create a congruent triangle. Label all points of the two triangles. Record the coordinates of the second triangle. Finally, compute all of the side lengths of both triangles.

A = (-6, 1)

B = (-2, 1)

C = (-2, 7)
